Create OAuth client ID

A client ID is used to identify a single app to Google's OAuth servers. If your app runs on multiple platforms, each will need its own client ID. See [Setting up OAuth 2.0](#) for more information. [Learn more](#) about OAuth client types.

Application type *
Web application

Name *
Web client 1

The name of your OAuth 2.0 client. This name is only used to identify the client in the console and will not be shown to end users.

1

The domains of the URIs you add below will be automatically added to your [OAuth consent screen](#) as [authorized domains](#).

Authorized JavaScript origins

For use with requests from a browser

+ Add URI

Authorized redirect URIs

For use with requests from a web server

+ Add URI

Note: It may take 5 minutes to a few hours for settings to take effect

CreateCancel

OAuth configuration created!

Cloud Assist

Preview

1. Go to APIs & Services > Credentials.

2. Click Create Credentials at the top and select OAuth client ID.

3. Select an Application type (e.g., *Web application, Desktop app, or iOS/Android*).

- Note: If you select Web application, you must provide Authorized redirect URIs where Google will send the authorization code.*

4. Enter a name for the credential and click Create.

5. A dialog will appear with your Client ID and Client Secret. Download the JSON file or copy these values to a secure location.

Summary Checklist

Step	Action
1	Enable Google Drive API & Gmail API in the Library.
2	Set up the OAuth Consent Screen with necessary scopes.
3	Create the OAuth Client ID and save
